Tips to Scale & Extend Agents

Prompt Engineering for Precision

- Craft clear, structured prompts to reduce ambiguity and improve agent output
- Use role-based prompting and system messages for consistency

Memory Modules for Context Retention

- Integrate short-term and long-term memory for contextual continuity
- Apply conversation history buffers or vector memory stores

Tips to Scale & Extend Agents

Feedback Loops

- Use explicit or implicit user feedback to rate and improve responses
- Train agents to adapt based on historical performance

Human-in-the-Loop Review

- Allow manual review for critical or ambiguous agent actions
- Blend automation with oversight for higher reliability

Next Steps & Future Enhancements

Add agents for **stock price forecasting** using time series models

Plug into external APIs (e.g., **financial news, social sentiment**)

Integrate **visual agents** for automatic chart generation

Enable **user history tracking, personalized dashboards**

Include **sentiment analysis** of market news

Add **notifications, alerts, and summary exports**
